

# Network Assurance Contract Plus Managed Services!

## Your network is Mission Critical!

Proactive service delivery anticipates problems before they happen and repairs unavoidable network outages in record time. It minimizes downtime, emergency service calls and the lost productivity associated with traditional reactive network repair (break/fix).

From satisfying your customers to maintaining a profitable operation, your network is critical to your business success. Your network needs to:

- Operate with maximum efficiency
- Be Responsive
- Perform reliably
- Become an asset, not a liability!

## What happens to:

- Your productivity** if the network connecting your computers, printers and copiers breaks?
- Your business** if email or other critical applications are not available?
- Your reputation** if you are unable to provide service, miss delivery dates or ship products incorrectly?
- Your bottom line** if your employees can't do their job or your customers are dissatisfied?

## "A stitch in time saves nine"

is so often true with computers. A little time fixing problems before they happen can often save many hours, even days, of effort to repair it after it breaks. Often the out of pocket cost of the NAC Plus is less than the cost of fixing a computer after it breaks. This is without even considering the impact on your employee productivity and customer satisfaction caused by the significantly longer time it takes to fix computer problems reactively (after they break).

## Network downtime is not an option:

The Network Assurance Contract Plus Managed Services (NAC Plus) eliminates up to 80% of emergency service calls at a very affordable price. The cost can often be less than what you are currently paying and the business savings can be dramatic.

"Terry and John at PSSI are great to work with. They have provided our company prompt and excellent service. I highly recommend them to any organization."

Steve Cochran, Funeral homes in North Georgia Mountains
